Summary

As a french computer science student, I am seeking an international internship for summer 2026 (I am available from May 18th to August 28th) to apply my technical skills and contribute to innovative projects.

Work Experience

Apprenticeship - Ampere Software Technology (Renault Group) Sept 2024 - present

Design of validation tooling for the Software-Defined Vehicle (SDV) : Full development of the RMES application in Rust, orchestrating architecture data extraction (via GraphQL API) and the automated generation of complex test commands for SOME/IP and Protobuf protocols. Industrialization of the solution via a testable modular architecture (Mocking, Traits) and integration of a CLI mode for GitLab CI/CD pipelines, replacing manual processes with automated continuous validation.

Apprenticeship - European Systems Integration Sept 2022 - Jul 2024

- Java application development for exporting data in JSON format from a remote database.
- Automated testing development in Java using Selenium and TestNG, followed by migration to TypeScript with Cypress.

Projects

rust-chip-8 Link to the repo

Development of a CHIP-8 emulator in Rust, focusing on efficient instruction decoding, precise timing, and accurate rendering, with an emphasis on performance, safety, and code clarity.

Ticket to Ride 3rd year

Group project: Development of a text-based Ticket to Ride game in Java, featuring multiple AI bots with different playing strategies, focusing on game logic, strategy implementation, and collaborative design.

FISK 1st year

Development of Fisk, a variant of Risk featuring bankers, implemented in Java with a JavaFX graphical user interface, focusing on game mechanics, UI design, and multiplayer interaction.

Education

2024 - present	Engineering Degree in Computer Science at **Polytech Nice - Sophia Antipolis**
2022 - 2024	University Diploma in Computer Science (DUT) at **IUT Nice Côte d'Azur**
2022	French Baccalauréat – Scientific Track, ESABAC specialty

Skills

Languages:	French : Native, Italian : Native, English : B2
Programming Languages:	Rust, C, C++, Java, Python, TypeScript, ASM
Tools and Technologies:	CI/CD pipelines, Git, Docker, GraphQL, REST APIs
Technical Skills:	Object-Oriented Programming, Systems Programming, Networking and Security, Virtualization, Web Development
